

At the feet of knowledge.

Durable cushioned feet fit on a wide range of classroom furniture.

Make sure it's Hushh-ups® or you'll hear about it!

The noise created by a single chair scraping on uncarpeted floors significantly exceeds the volume of a teacher's voice. This noise is just 15 decibels less than that of a jackhammer or motorcycle. The results are distracting and nerve-racking to students and teachers alike. Noisy environments decrease a child's ability to understand speech by as much as 40 percent. That is why Hushh-ups® provide a sensible solution to sound control.
